

# 200 million infections & 1 million deaths are caused by **Malaria** annually

Malaria is a mosquito-borne, haemolytic, febrile illness. Malaria is caused by four species of Plasmodium. All these plasmodia infect and destroy human erythrocytes, causing symptoms such as chills, fever, anaemia, and splenomegaly.

With the **NADAL® Malaria tests** you can detect all four species of Malaria pathogens.

nal von minden offers you **4-species tests** for the detection of malaria antigens (Histidine Rich Protein II (HRP II) and parasite Lactate Dehydrogenase (pLDH)). Furthermore we have rapid tests for the detection of Malaria antibodies (IgG, IgM, IgA) against *P. falciparum* and *P. vivax* in our portfolio.

Our **customer service team** is on hand to answer any questions you may have by telephone, via email or in a personal consultation. For details on **your local sales office and regional free phone numbers**, visit [www.nal-vonminden.com](http://www.nal-vonminden.com).
